

Problem-Solution Fit

Date	15 March 2026
Team ID	xxxxxxx
Project Name	Rising waters
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] Disaster Management Authorities, Government Officials, Emergency Response Teams, Residents of Flood-Prone Areas	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] Limited access to real-time prediction tools, dependence on manual monitoring, limited technical resources in some areas.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] Manual Monitoring: Simple but slow. Rule-Based Systems: Easy to implement but less accurate. Weather Reports: Helpful but do not provide personalized flood risk prediction.
--	---	--

2. PROBLEMS / PAINS + ITS FREQUENCY [PR] Difficulty in predicting floods accurately, delayed warnings, loss of lives and property during heavy rainfall. (Occurs frequently during monsoon seasons.)	9. PROBLEM ROOT / CAUSE [RC] Climate change, heavy rainfall, overflowing rivers, poor drainage systems, delayed analysis of environmental data.	7. BEHAVIOR + ITS INTENSITY [BE] Frequently checks weather forecasts and river levels during monsoon; immediately responds to official flood warnings.
3. TRIGGERS TO ACT [TR] Heavy rainfall, rising river levels, weather alerts, flood-prone conditions.	10. YOUR SOLUTION [SL] A Machine Learning-based Flood Prediction System that analyzes environmental parameters and provides real-time flood risk prediction with probability scores and safety recommendations through a user-friendly web application.	8. CHANNELS OF BEHAVIOR [CH] ONLINE Government websites, weather apps, news portals, web application. OFFLINE TV news, radio, local authorities, public announcements.
4. EMOTIONS BEFORE / AFTER [EM] Before: Worried, anxious, uncertain. After: Confident, informed, prepared.
